Make sure you keep your iMail5 server up to date to get all the newest features and patches. The latest update, version 5.0.14, adds numerous stability and operational fixes along with useful enhancements. The full list of changes can be found on the [support forums](#).

Head over to the [iMail5 section](#) of the products pages to download the latest installer now.

Introducing full web management, total system security and standards based e-mail client support, the latest version of iMail provides all your messaging needs on Linux or Windows servers.
