

Download iMail 3 for free

Written by Josh Gibbs

Thursday, 21 October 2010 19:14

With the release of iMail version 5 coming soon we will no longer be actively developing older versions and, due to this, cannot provide the level of support and maintenance we have done in the past.

Rather than make the product unavailable, and to help out those organisations that are not yet ready to move off NetWare, we are offering version 3 for Netware free of charge. Support for version 3 will remain open on the forums, and limited repairs may be done where necessary.

To obtain a license we will require your company name to register against the license code. Click the link below to acquire your license.
